

Mass Relationships in Chemical Reactions

Personal use only
Use WISELY!!!

Micro World
atoms & molecules

Macro World
grams

Atomic mass is the mass of an atom in atomic mass units (amu)

By definition:
1 atom ^{12}C “weighs” 12 amu

On this scale

$^1\text{H} = 1.008 \text{ amu}$

$^{16}\text{O} = 16.00 \text{ amu}$

Natural lithium is:

7.42% ${}^6\text{Li}$ (6.015 amu)

92.58% ${}^7\text{Li}$ (7.016 amu)

Average atomic mass of lithium:

$$\frac{7.42 \times 6.015 + 92.58 \times 7.016}{100} = 6.941 \text{ amu}$$

Dozen = 12

Pair = 2

The ***mole (mol)*** is the amount of a substance that contains as many elementary entities as there are atoms in exactly 12.00 grams of ^{12}C

$$1 \text{ mol} = N_A = 6.0221367 \times 10^{23}$$

Avogadro's number (N_A)

Molar mass is the mass of 1 mole of eggs
shoes
marbles
atoms in grams

$$1 \text{ mole } ^{12}\text{C atoms} = 6.022 \times 10^{23} \text{ atoms} = 12.00 \text{ g}$$

$$1 \text{ } ^{12}\text{C atom} = 12.00 \text{ amu}$$

$$1 \text{ mole } ^{12}\text{C atoms} = 12.00 \text{ g } ^{12}\text{C}$$

$$1 \text{ mole lithium atoms} = 6.941 \text{ g of Li}$$

For any element
atomic mass (amu) = molar mass (grams)

One Mole of:

C

S

Hg

Cu

Fe

$$\frac{1 \text{ } ^{12}\text{C} \text{ atom}}{12.00 \text{ amu}} \times \frac{12.00 \text{ g}}{6.022 \times 10^{23} \text{ } ^{12}\text{C} \text{ atoms}} = \frac{1.66 \times 10^{-24} \text{ g}}{1 \text{ amu}}$$

$$1 \text{ amu} = 1.66 \times 10^{-24} \text{ g} \quad \text{or} \quad 1 \text{ g} = 6.022 \times 10^{23} \text{ amu}$$

M = molar mass in g/mol

N_A = Avogadro's number

Do You Understand Molar Mass?

How many atoms are in 0.551 g of potassium (K) ?

Molecular mass (or molecular weight) is the sum of the atomic masses (in amu) in a molecule.

1S	32.07 amu
2O	+ 2 x 16.00 amu
SO ₂	<hr/> 64.07 amu

For any molecule
molecular mass (amu) = molar mass (grams)

$$1 \text{ molecule SO}_2 = 64.07 \text{ amu}$$

$$1 \text{ mole SO}_2 = 64.07 \text{ g SO}_2$$

Do You Understand Molecular Mass?

How many H atoms are in 72.5 g of $\text{C}_3\text{H}_8\text{O}$?

Formula mass is the sum of the atomic masses (in amu) in a formula unit of an ionic compound.

NaCl

1Na	22.99 amu
1Cl	+ 35.45 amu
NaCl	<hr/> 58.44 amu

For any ionic compound
formula mass (amu) = molar mass (grams)

1 formula unit NaCl = 58.44 amu

1 mole NaCl = 58.44 g NaCl

Do You Understand Formula Mass?

What is the formula mass of $\text{Ca}_3(\text{PO}_4)_2$?

Mass Spectrometer

$$KE = \frac{1}{2} \times m \times v^2$$

$$v = (2 \times KE/m)^{1/2}$$

$$F = q \times v \times B$$

Percent composition of an element in a compound =

$$\frac{n \times \text{molar mass of element}}{\text{molar mass of compound}} \times 100\%$$

n is the number of moles of the element in **1 mole** of the compound

$$\% \text{C} = \frac{2 \times (12.01 \text{ g})}{46.07 \text{ g}} \times 100\% = 52.14\%$$

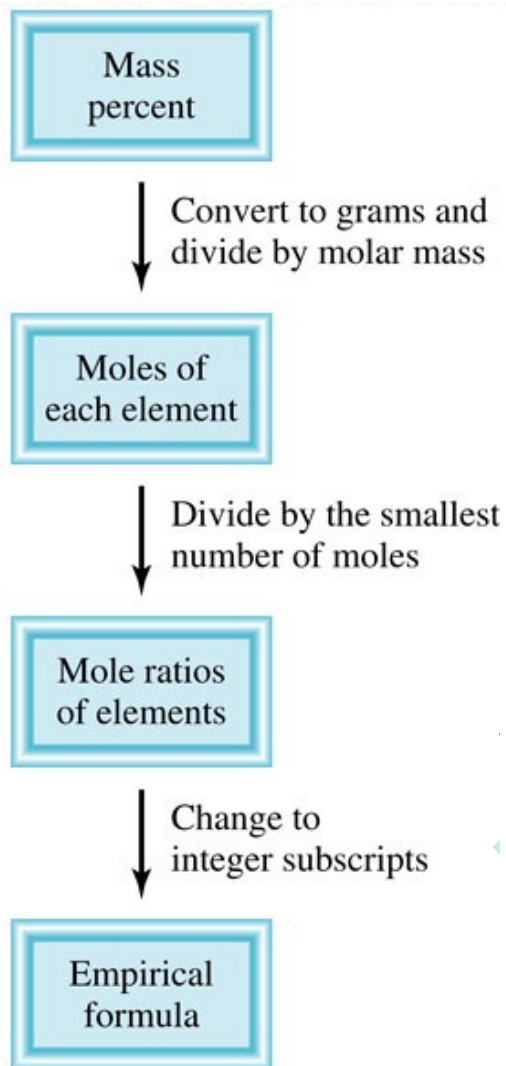

$$\% \text{H} = \frac{6 \times (1.008 \text{ g})}{46.07 \text{ g}} \times 100\% = 13.13\%$$

$$\% \text{O} = \frac{1 \times (16.00 \text{ g})}{46.07 \text{ g}} \times 100\% = 34.73\%$$

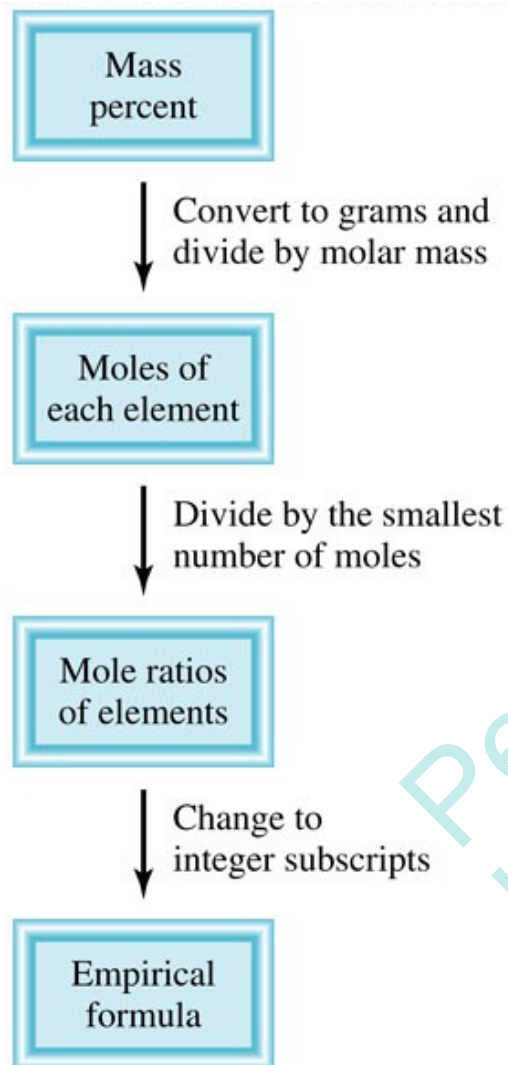

$$52.14\% + 13.13\% + 34.73\% = 100.0\%$$

Percent Composition and Empirical Formulas

Determine the empirical formula of a compound that has the following percent composition by mass:
K 24.75, Mn 34.77, O 40.51 percent.

Percent Composition and Empirical Formulas

$$n_{\text{K}} = 0.6330, n_{\text{Mn}} = 0.6329, n_{\text{O}} = 2.532$$

$$\text{K} : \frac{0.6330}{0.6329} \approx 1.0$$

$$\text{Mn} : \frac{0.6329}{0.6329} = 1.0$$

$$\text{O} : \frac{2.532}{0.6329} \approx 4.0$$

Combust 11.5 g ethanol

Collect 22.0 g CO_2 and 13.5 g H_2O

g CO_2 \longrightarrow mol CO_2 \longrightarrow mol C \longrightarrow g C 6.0 g C = 0.5 mol C

g H_2O \longrightarrow mol H_2O \longrightarrow mol H \longrightarrow g H 1.5 g H = 1.5 mol H

g of O = g of sample - (g of C + g of H) 4.0 g O = 0.25 mol O

Empirical formula $\text{C}_{0.5}\text{H}_{1.5}\text{O}_{0.25}$

Divide by smallest subscript (0.25)

Empirical formula $\text{C}_2\text{H}_6\text{O}$

A process in which one or more substances is changed into one or more new substances is a **chemical reaction**

A **chemical equation** uses chemical symbols to show what happens during a chemical reaction

3 ways of representing the reaction of H_2 with O_2 to form H_2O

+

Two hydrogen molecules

+

One oxygen molecule

Two water molecules

+

reactants \longrightarrow products

How to “Read” Chemical Equations

2 atoms Mg + 1 molecule O₂ makes 2 formula units MgO

2 moles Mg + 1 mole O₂ makes 2 moles MgO

48.6 grams Mg + 32.0 grams O₂ makes 80.6 g MgO

IS NOT

2 grams Mg + 1 gram O₂ makes 2 g MgO

Balancing Chemical Equations

1. Write the **correct** formula(s) for the reactants on the left side and the **correct** formula(s) for the product(s) on the right side of the equation.

Ethane reacts with oxygen to form carbon dioxide and water

2. Change the numbers in front of the formulas (***coefficients***) to make the number of atoms of each element the same on both sides of the equation. Do not change the subscripts.

Balancing Chemical Equations

3. Start by balancing those elements that appear in only one reactant and one product.

2 carbon
on left

1 carbon
on right

multiply CO_2 by 2

6 hydrogen
on left

2 hydrogen
on right

multiply H_2O by 3

Balancing Chemical Equations

4. Balance those elements that appear in two or more reactants or products.

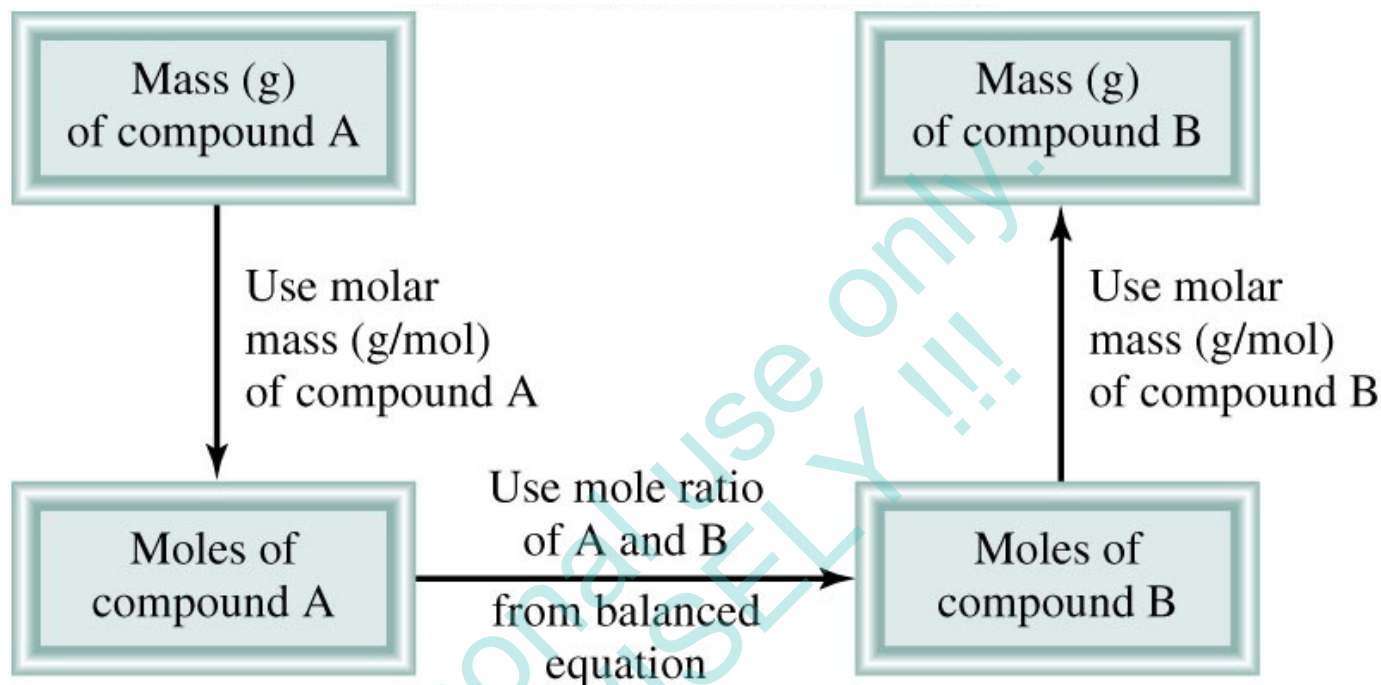

Balancing Chemical Equations

5. Check to make sure that you have the same number of each type of atom on both sides of the equation.

Reactants	Products
4 C	4 C
12 H	12 H
14 O	14 O

Amounts of Reactants and Products

1. Write balanced chemical equation
2. Convert quantities of known substances into moles
3. Use coefficients in balanced equation to calculate the number of moles of the sought quantity
4. Convert moles of sought quantity into desired units

Methanol burns in air according to the equation

If 209 g of methanol are used up in the combustion, what mass of water is produced?

Limiting Reagents

NO is the limiting reagent

O₂ is the excess reagent

Before reaction has started

After reaction is complete

Do You Understand Limiting Reagents?

In one process, 124 g of Al are reacted with 601 g of Fe_2O_3

Calculate the mass of Al_2O_3 formed.

Use limiting reagent (Al) to calculate amount of product that can be formed.

Reaction Yield

Theoretical Yield is the amount of product that would result if all the limiting reagent reacted.

Actual Yield is the amount of product actually obtained from a reaction.

$$\% \text{ Yield} = \frac{\text{Actual Yield}}{\text{Theoretical Yield}} \times 100$$

Chemistry In Action: Chemical Fertilizers

Plants need: N, P, K, Ca, S, & Mg

fluorapatite
